1. Plan the pet shop

- owners, pets, products, sales, sale_items
- Owners have many pets and many sales
- sale_items = junction for sales and products

```
SELECT name FROM sqlite_master
WHERE type = 'table' ORDER BY name;
```

name
owners
pets
products
sale_items
sales

2. Build with keys & rules

- PRIMARY KEY and FOREIGN KEY (REFERENCES)
- NOT NULL, UNIQUE, CHECK, DEFAULT
- Fill data inside BEGIN … COMMIT

3. Ask real questions

- JOIN through the junction table
- SUM(qty * price) for receipt totals
- GROUP BY, ORDER BY, LIMIT for top sellers

```
SELECT pr.name, SUM(si.qty) AS sold FROM sale_items AS si
JOIN products AS pr ON si.product_id = pr.product_id
GROUP BY pr.name ORDER BY sold DESC LIMIT 3;
```

name	sold
Squeaky Bone	4
Dog Food 5kg	4
Fish Flakes	3

4. Advanced answers

- RANK() OVER to rank customers
- WITH + SUM OVER for running revenue
- NOT EXISTS for products that never sold
- A VIEW for VIP customers

5. Course complete! What's next

- Practice daily: sqlbolt.com, sqliteonline.com
- Use your own data and hobbies
- Try PostgreSQL or MySQL
- More courses coming on Beyond School!
